Data Dictionary for Validated Dataset for LIHEAP data

Column	DataType	Summary	Valid Ranges
Zip Code	str	This column references the zip code in the San Diego area that is captured for the liheap enrollment record.	
Month Year	period[M]	This column references the month that was captured for the enrollment in Liheap	2023-01 to 2023-07
Enrollment	int64	This column is the numeric count of enrollments for each month within the specified zip code in the San Diego area.	1-75
Is_Negative	bool	This is a boolean column which returns true is the integer value for enrollment is less than 0. It returns false if the integer value for enrollment is greater than 0	Either True for less than 0 or False than greater than 0
Outlier	bool	This is a boolean column that returns true if the integer value or enrollment is greater than the value of 24.5, which represents the upper bound for enrollment in the validated dataset. If the integer value of enrollment is less than 24.5, the output of the column is false.	Either True for enrollment count greater than 24.5 or False for enrollment count that was less than 24.5

This data source appears to be collected monthly to gauge enrollment for LIHEAP assistance programs by zip codes.

The biggest limitation of the data is the following: 13961 of 18940 rows (73.7%) were excluded for missing/invalid zip code, there is definitely an issue with capturing the zip code during the enrollment process.

Another limitation of the data is that the records of enrollments with zip codes that are not null and in San Diego county only occur within the date range of January 2023 to July 2023.

I learned that the enrollment for HIPEAH by zip codes is heavily concentrated in the following areas:

- A san diego cluster with zip codes 92105, 92115, 92111, 92104 and 92102 which are located in City Heights, College Area, North Park as well as Golden Hill
- An East Count/North Island cluster in the zip codes of 92020, 92021 in El Cajon as well as 92027 Escondido

The enrollment for liheap drop off dramatically outside of these regions as seen by the enrollment in alpine.
